**Shaded** =  $F > 10$ . **Reduced form, not first stage.** Firm + muni×year FE.

## BNDES outcomes

- **Intensive margin: no strong instruments.**  
Max  $F \approx 6$  across all 32 specs.
- **Extensive margin: three viable families.**
  - Coal · Unwt · Pooled (both baselines)
  - Coal · Unwt · Binary (M+P and M+G+P only)
  - Party · Unwt · Pooled (cycle-specific only)
- **Emp.-weighted is consistently weak**  
across all outcomes and baselines.

## Employment outcomes (reduced form)

- Very large  $F$  (up to 265) for Coal · Unwt specs.
- $F \gg 10$  may indicate alignment affects employment through channels other than BNDES, a potential exclusion restriction concern.
- Party specs with cycle-specific weights pass  $F > 10$  for employment share but not for BNDES outcomes.

## Appendix

Full regression tables for all specs with  $F > 10$  in at least one instrument column

# Appendix: specs included ( $n = 26$ )
